ONE BALIWASAN

Welcome to Your Digital Barangay

Our System

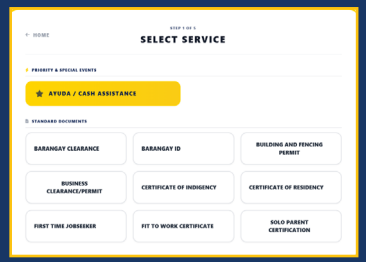
ONE BALIWASAN is a digital queuing and management platform built to modernize public service for both the community and the barangay staff. For residents, it eliminates the crowded waiting room by allowing you to book appointments, track the live queue, and receive instant SMS alerts directly from your smartphone.

For barangay officials, it acts as a powerful command center that automates crowd control, manages walk-in traffic, and provides instant data analytics to improve daily operations. It bridges the gap between convenience and efficiency, ensuring citizens get fast, transparent service while the barangay staff reclaims their administrative workflow.

System Features

For the Residents

Book your appointment or join the live queue directly from your smartphone. You will receive instant SMS alerts when your turn approaches. The system also provides a central digital hub for all local barangay updates.

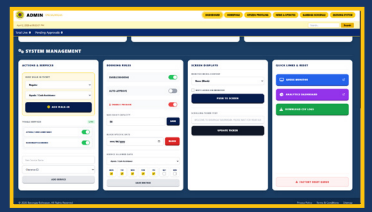


Inside the Hall

A transparent, real-time smart monitor displays the live queue so no ticket numbers are ever skipped or ignored.

For Barangay Officials

Administrators maintain total control to block dates, customize services, and track performance through instant data analytics. It also guarantees continuous operation with a local offline mode and automatic daily backups.



Experience Better Public Service

"

ONE BALIWASAN is a comprehensive digital queuing and management platform built to modernize operations on both sides of the barangay counter.

For the residents, it is a tool to reclaim their day. The portal eliminates the crowded waiting room by allowing citizens to secure their spot, schedule appointments, and receive real-time SMS alerts directly on their mobile phones.

For the barangay officials and staff, it is a powerful command center. The system replaces manual logging with automated load balancing, giving admins total control over daily walk-in limits, service availability, and priority lanes. With built-in analytics tracking peak hours and transaction volumes, officials can finally make
